## CONCUSSION GRADING SCALE

The Concussion Grading Scale is essentially a state measure of perceived symptoms associate with concussion. That is, the athlete is asked to report their *current* experience of symptoms. This allows tracking of symptoms over very short intervals, such as consecutive days or every few days.

Directions: *After reading each symptom, please circle the number that best describes the way the athlete has been feeling today. A rating of 0 means they have not experienced this symptom today. A rating of 6 means they have experienced severe problems with this symptom today.*
